

Črt Gregorič

Lead iOS Engineer

Ljubljana, Slovenia | +386 41 816 626 | crt.gregoric@gmail.com | gregoric.me/portfolio | linkedin.com/in/crtgregoric

Professional Summary

Lead iOS engineer with 12+ years of professional experience building polished mobile products from first prototype through international scale. Founding iOS engineer and former eight-year Lead at [Speak](#), where I joined at the two-founder stage, built the iOS application from scratch, and served as its primary owner and maintainer for the first five years. I combine hands-on product engineering with technical leadership, strong visual judgment, secure application architecture, dependable delivery, and modern AI-assisted development workflows.

Core Expertise

- **iOS Engineering:** Swift, SwiftUI, UIKit, Objective-C, Swift Concurrency, iOS and iPadOS
- **Architecture & Platform:** Modular Swift packages, application architecture, state management, dependency injection, API design, secure authentication and session management
- **AI-Assisted Development:** Claude Code, Codex, agentic planning and implementation, automated code review, test generation, acceptance-criteria verification
- **Product Engineering:** Complex UI and animation, UIKit/SwiftUI interoperability, design systems, accessibility, performance, testing, release quality
- **Infrastructure & Delivery:** REST APIs, Firebase, CI/CD, analytics and experimentation, observability, App Store delivery

Experience

USBC (YES) | Senior iOS Engineer

January 2026 - September 2026 | Remote, Ljubljana / Reno, Nevada

Core engineer on the mobile team building YES, a SwiftUI-native financial application for tokenized deposits, digital identity, payments, and encrypted messaging.

- Built the native onboarding and authentication foundation, including phone and email OTP flows, passcode creation, consent, OAuth2 token exchange, session state management, Keychain persistence, and restoration across app launches.
- Led the migration of Matrix-based encrypted messaging into a standalone Swift package; integrated the Matrix SDK, implemented custodial recovery-key handling, and resolved complex cross-identity authentication, logout, and client-lifecycle races.
- Delivered the multi-identity account system and redesigned asset selection across send, receive, convert, buy, sell, and chat payment flows.
- Designed and rolled out a unified structured logging system, consolidating multiple legacy logging paths into consistent categories and severity levels while improving privacy and production diagnostics across environments.
- Strengthened the design system and engineering platform through reusable SwiftUI components, accessibility rules, asset synchronization, XcodeGen tooling, and sustained codebase-health and CI-stability improvements.
- Used shared, repository-integrated Claude Code workflows for ticket decomposition, planning, code generation, testing, acceptance-criteria verification, iterative repair, and multi-stage review; contributed reusable logging guidance, permission safeguards, and MCP integrations.

Speakeasy Labs (Speak) | Founding & Lead iOS Engineer

August 2017 - September 2025 | Remote, Ljubljana / San Francisco, California

Speak is a leading AI-powered language-learning platform: the #1 English app in South Korea, serving learners in more than 30 countries, with over \$150 million raised from the OpenAI Startup Fund, Accel, Founders Fund, Khosla Ventures, and other investors.

- Joined when the company consisted of its two co-founders, built the complete iOS application from scratch, and served as its primary owner and maintainer for the first five years.
- Took the app from prototype to a globally distributed production product, owning architecture, feature implementation, stability, release quality, and the long-term direction of the codebase.
- Delivered the majority of early user-facing functionality, including complex UIKit interfaces, custom interactions and animations, and hybrid UIKit/SwiftUI experiences with tightly synchronized application state and motion.
- Established core mobile infrastructure across Firebase Realtime Database, Firestore and Storage, analytics pipelines, A/B testing, crash monitoring, automated delivery, and TestFlight distribution.
- Integrated and operated a broad product stack including LiveKit/WebRTC, RevenueCat, Intercom, Customer.io, Segment, Amplitude, Mixpanel, Split.io, and regional authentication providers.
- Worked directly with the CTO and CEO on product planning and technical strategy during the formative years, translating product ideas into maintainable iOS features and aligned client-server contracts.
- Coordinated API planning and technical specifications across iOS, Android, and backend teams, helping distributed teams make compatible implementation decisions across large time-zone differences.
- Helped build the first engineering team by sourcing and interviewing candidates across iOS, Android, backend, and QA; later onboarded iOS engineers, reviewed code, and supported their progress in the codebase.
- Earned a reputation for thoughtful collaboration, close attention to design detail, smooth QA cycles, stable releases, and consistently polished product execution.

Kamino | Senior iOS Engineer

January 2016 - May 2017 | Ljubljana, Slovenia

- Led iOS development for eAsistent and Fancore while delivering consumer and education applications across Swift, Objective-C, and UIKit.
- Built custom, data-rich interfaces and interactions, including visualization, animation, and tablet experiences.

D-Labs | iOS Engineer

April - June 2014; October 2014 - December 2015 | Ljubljana, Slovenia

- Progressed from intern to project lead for Rock Pamper Scissors, contributing to a broad portfolio of client applications including Minicabster, Teepee, Lock and Charge, Outcast, Go Car Share, and Rock it.
- Developed iOS and watchOS products using Objective-C, Swift, XIBs, storyboards, programmatic UIKit, and custom UI components.

Layer | Summer Intern

July - September 2013 | San Francisco, California

- Improved documentation for the Layer iOS SDK and developed reusable iOS interface components.

Other Freelance Work

- **Speech Blubs**, 2017, speech therapy app for children
- **Instavest**, 2017, investment app
- **Yomento**, 2016/2017, leadership coaching app
- **WorkClean**, 2016, productivity app

Education

University of Ljubljana, Faculty of Computer and Information Science

BSc, Computer Science | October 2011 - February 2015

Bachelor's thesis: designed and built an iOS-controlled mobile robot, including its sensors, servos, camera, and lighting; developed the native iPhone/iPad control application with real-time video streaming and Python control software for Raspberry Pi.

Achievements

- [TechCrunch](#) Disrupt SF 2013 winner, San Francisco, CA.
- Dean's award for exemplary completed academic requirements, Faculty of Computer and Information Science, University of Ljubljana.

Additional Information

Languages: Fluent in English, Italian, Slovenian

Interests: Apple Ecosystem; Music Production; Guitar Playing, Maintenance & Setup
